

STREET SWEEPING SCHEDULE

KC Water, on behalf of the City of Kansas City, Missouri, conducts scheduled street sweeping. Street sweeping removes trash and debris that can wash into catch basins (storm drains) and ultimately run into area streams and rivers. Clean catch basins help prevent flooding, and keeping trash and debris out of area streams and rivers helps improve the region's water quality.

Customers are encouraged to contact **816-513-1313** or **311** if they have a special request for an area to be swept. KC Water currently has eight street sweepers that cover the entire Kansas City area. The goal is to clean the three major areas of Kansas City (please see map on reverse side) on a routine basis. For every special request that is sent to us through 311, KC Water adjusts the sweeping schedule to accommodate these requests; this can unfortunately cause delays on the entire sweeping process.
