

KC WATER SERVICE LINE INVENTORY PROGRAM

What's your
pipe made of?

Underground Service Line Inspections Are Underway

KC Water is conducting visual inspections and/or potholing on the block to identify water service line materials. A water service line is the pipe that carries drinking water into your home or business.

KC Water has contracted ACE Pipe Cleaning to perform this work near the curb-stop valve, located near your yard. Crews may identify the material that makes up your service line by digging an 8-10 inch diameter hole, and will restore it within 72 hours, weather permitting. In some cases, potholing may occur in sidewalks or driveways, which may require a section of concrete to be removed and replaced.

So what is your pipe made of?

Use our quick **Self-Reporting Tool** to identify what your service line is made of. Just answer a few questions and upload a few photos of your service line – it's easy, and it may eliminate the need for our team to schedule an interior visual inspection.
