

# KC WATER SERVICE LINE INVENTORY PROGRAM

What's your  
**pipe made of?**

## Underground Service Line Inspections Are Underway

KC Water has contracted ACE Pipe Cleaning to conduct visual inspections and/or potholing on the block to identify water service line materials. To conduct this work, ACE requires access to the streets, sidewalks, driveways, and grassed areas by the curb. Crews need to dig a small investigatory hole, and will restore it within 72 hours, weather permitting. In some cases, potholing may occur in sidewalks or driveways, which may require a section of concrete to be removed and replaced.

Flip to the back to learn more about the self-reporting tool and flushing your service line after the work's completed.

## DON'T RISK BEING TOWED

In order for crews to perform the work, please have vehicles removed from the street where "NO PARKING" signs are present by 8:00 AM.

### Self-Reporting Tool:

Want to avoid an in-home inspection? Use the self-reporting tool located on our website to share photos and information regarding your pipe material.

### Flushing a Service Line

You may notice changes to water color or pressure that would require your service line to be flushed. To learn how to properly flush your service line, or to use the self-reporting tool, scan the QR code below or contact the hotline.
